Windchill PDMLink Change Management Usability Features

In the [January 2007 edition of the Technical Specialists Newsletter](#), the benefits of Windchill maintenance releases were covered. The Windchill PDMLink 8.0 M020 maintenance release included a group of usability improvements to the PDMLink change package that are very beneficial to end users.

The usability improvements include:

- Copy and Paste action on Affected Data and Resulting Items tables
- Expand-All and Collapse-All actions on change information pages
- Propagate data from a Problem Report to a Engineering Change Request
- Propagate data from a Change Request to a Engineering Change Notice

Let's take a closer look at the improvements in the following sections.

Copy and Paste

Copying and pasting items to the Windchill PDMLink clipboard allows users to add items to change objects much more easily and quickly. A user may select multiple items from the Windchill PDMLink user interface and using the copy icon, add them to the clipboard for use in the change process. Figure 1 shows how to collect and copy the items from the product structure page of a small assembly. Note that from this page the user can collect multiple object types easily and copy them quickly to the clipboard.

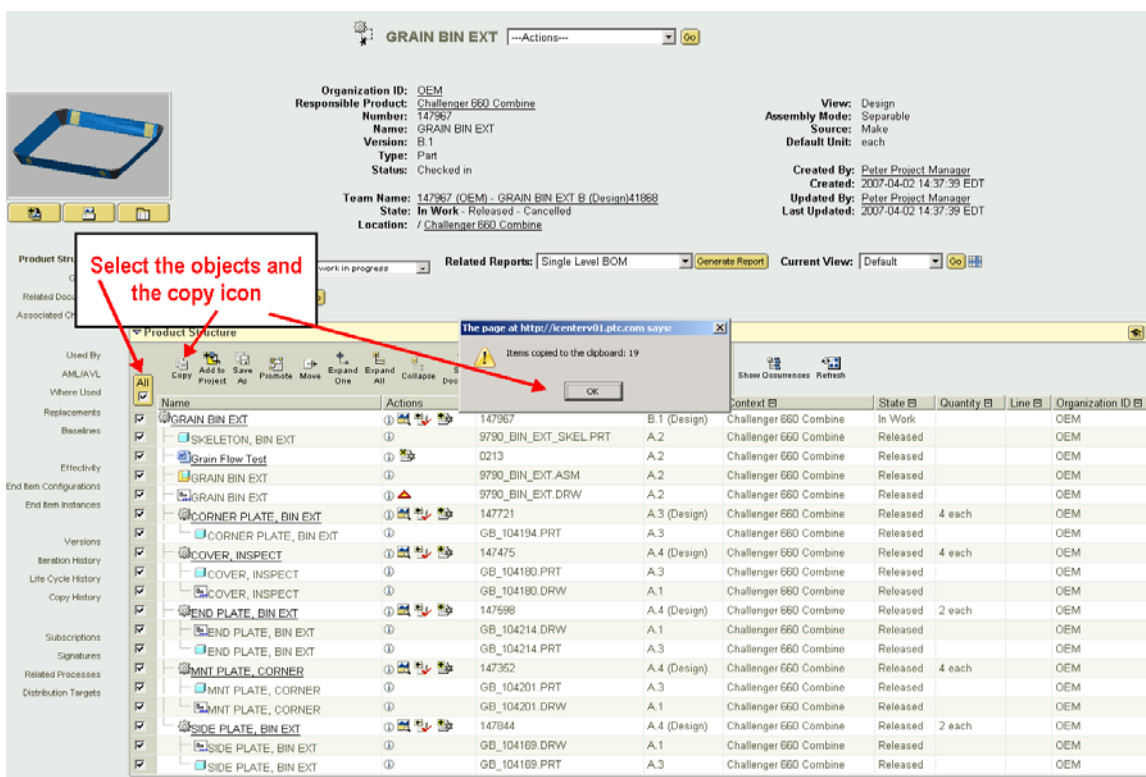

Figure 1 – Showing items successfully collected and copied to the Windchill PDMLink clipboard.

Once the objects are copied to the clipboard they can be added as affected items to a Problem Report (PR) or an Engineering Change Request (ECR), or they can be added as resulting items to an Engineering Change Notice (ECN). The clipboard data can be used multiple times if needed as well, and is not overwritten until a new copy is made. Figure 2 shows the result of pasting the copied items from the clipboard to the affected data tab on a Problem Report.

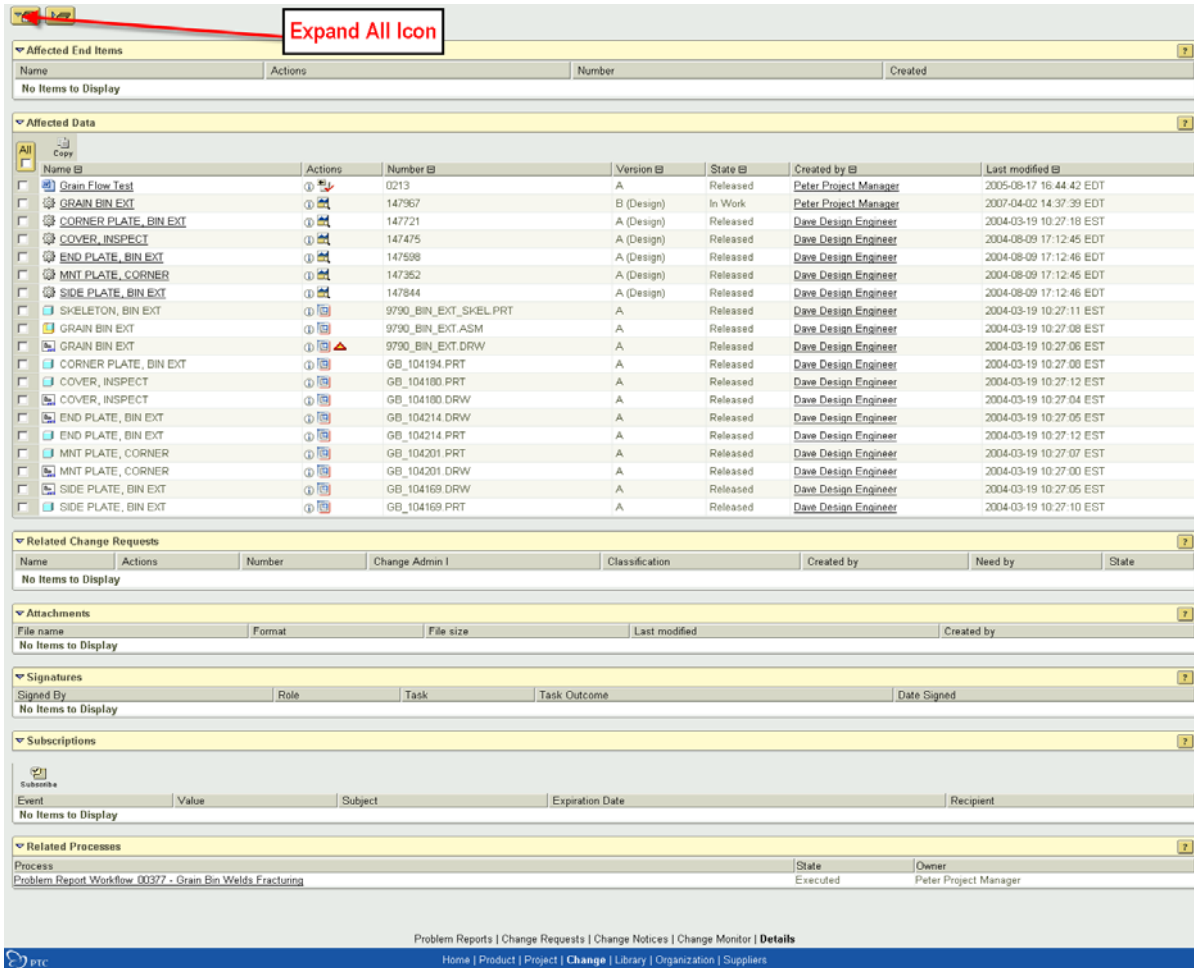

Figure 2 – Showing Objects successfully pasted to the Problem Report form.

The enhanced copy and paste feature expands the flexibility of the Windchill change forms and gives users a nice method to add data quickly.

Once the data is correctly copied to the change objects, then the user can take advantage of the improved expand and collapse function for usability and the data propagation functions discussed below.

Expand-All and Collapse-All

Expand-All and Collapse-All can help a user quickly view a change object form and filter the level of detail that needs to be shown improving the ability to read the page, and refresh the form. Figures 3 and 4 below, show the expand-all and collapse-all icons and the behavior observed when selecting them.

Data Propagation for Change Objects

Data propagation across the change objects has been a highly requested addition to the Windchill change package. With the release of Windchill PDMLink 8.0 M020, this is a standard offering giving end users a nice usability improvement!

The usability improvement provides the ability for users to propagate change object information from the Problem Report (PR) to the Engineering Change Request (ECR) and from the ECR to the Engineering Change Notice (ECN). To enable this feature a site preference must be set by the Windchill administrator. The preference can be set in the Windchill preference manager. The preference is **/wt/change2/PropagateChangeItems** set at the site level with a value of true. Once the preference is set any newly created ECR from a PR or ECN from an ECR, prompts the user to propagate the data. Figure 5 below shows the preference administrator with the value set for reference

Figure 5 – Preference administrator showing the propagate change items preference syntax and value.

From the PR example above, when a new ECR is created from the existing PR, the user is prompted whether or not to propagate the data to the ECR. See Figure 6 below.

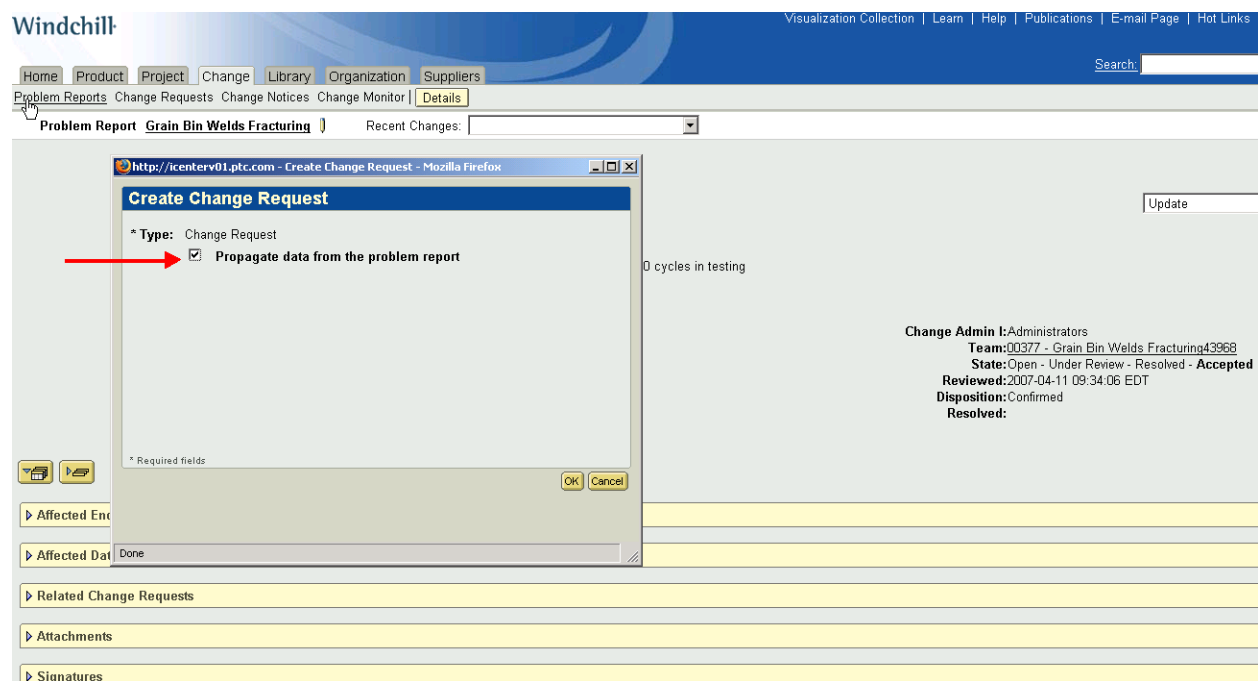

Figure 6 – Newly available propagate data pick prompting the user to copy selective data across change objects.

If the user selects the check box here, the data from the PR in the following fields will be copied to the ECR form. See Figure 7 below.

The screenshot shows a 'Problem Report' form with the following fields and annotations:

- Responsible Product:** Challenger 660 Combine
- Type:** Problem Report
- * Problem Report name:** Grain Bin Welds Fracturing (Annotated with a red circle and an arrow pointing to a box labeled 'Fields Propagated to ECR')
- Reported by:** Peter Project Manager
- * Problem Report classification:** Design Issue (Annotated with a red circle and an arrow pointing to the 'Fields Propagated to ECR' box)
- * Priority level:** High (Annotated with a red circle and an arrow pointing to the 'Fields Propagated to ECR' box)
- * Problem description:** Corner welds are fracturing after an average of 100,000 cycles in testing (Annotated with a red circle and an arrow pointing to the 'Fields Propagated to ECR' box)

At the top, there are tabs: 'Affected Data', 'Affected End Items', and 'Attachments'. The 'Affected Data' tab is selected and highlighted with a red circle. At the bottom right, there are 'OK' and 'Cancel' buttons.

Figure 7 – PR form with data fields that will be propagated to the ECR form, and all Affected Data, Affected End Items, and Attachments.

The Resulting ECR form after create is now partially filled in with the values copied from the PR. See Figures 8 and 9 for the resulting ECR form and the propagated data fields.

The screenshot shows a 'Create Change Request' form with the following fields and annotations:

- Responsible Product:** Challenger 660 Combine
- Type:** Change Request
- * Change Request name:** Grain Bin Welds Fracturing (Annotated with a red circle and an arrow pointing to a box labeled 'Propagated Data from PR Form')
- * Change Request classification:** Design Issue (Annotated with a red circle and an arrow pointing to the 'Propagated Data from PR Form' box)
- * Change Request description:** Corner welds are fracturing after an average of 100,000 cycles in testing (Annotated with a red circle and an arrow pointing to the 'Propagated Data from PR Form' box)
- Proposed solution:** (Empty text area)
- * Priority level:** Low
- Need by:** (Empty date field with a calendar icon and '(MM/DD/YYYY)')
- Recurring Cost Estimate:** (Empty text field)
- Non Recurring Cost Estimate:** (Empty text field)
- Submit:** ☐ Now ☒ Later

At the top, there are tabs: 'Affected Data', 'Affected End Items', 'Attachments', and 'Associated Problem Reports'. The 'Affected Data' tab is selected and highlighted with a red circle. At the bottom right, there are 'OK' and 'Cancel' buttons.

Figure 8 – Resulting ECR form with propagated data fields from the PR.

END PLATE, BIN EXT	GB_104214.PRT	A	EPM Document	

Figure 9 – Resulting ECR form with propagated Affected Data from the PR example.

The same type of propagation utility is available when creating a new ECN from an existing ECR with a slight difference in what type of data is propagated. The table below shows the data fields that are supported and propagated across the change objects when created.

Propagated Data Fields	<div> <div>Problem Report</div> <div>→ Propagate →</div> <div>Change Request</div> <div>→ Propagate →</div> <div>Change Notice</div> </div>	
Modeled Attributes	Name, Description, Classification	Name, Description, Need By
Soft Attributes	Not Supported	Not Supported
File Attachments	All	All
Affected End Items	All	Not Applicable
Affected Items	All	Not Supported

Figure 10 – Table showing propagated data fields (left column) from PR to ECR (middle column) and ECR to ECN (right column).

Taking advantage of these features can save time, reduce manual effort to create changes, and improve consistency of the data captured in the change process.

Windchill PDMLink Clipboard –Collection Tips for Change Objects

Collection Tips

The copy and paste selections are available in numerous places in the Windchill PDMLink user interface. With the release of PDMLink 8.0 M020 they are now available on change object forms for attaching affected and resulting items to the change objects. See the [PTC Product Focus section](#) for a quick overview of the new usability features in the Windchill PDMLink change package. Depending on the type of data you are trying to gather, the ease of collection can be facilitated by navigating to the correct page in Windchill PDMLink. The following are a few simple tips on where to find the data before copying to the clipboard in the most efficient manner.

For example, if you are trying to gather related Windchill parts and structure, navigating to the properties page for the top level object is the most straightforward. See Figure 1 below for example.

The screenshot displays the Windchill PDMLink interface for the 'Challenger 660 Combine'. The top navigation bar includes links like Home, Product, Project, Change, Library, Organization, and Suppliers. The main content area shows the 'GRAIN BIN EXT' object with its properties, including Organization ID, Responsible Product, Number, Name, Version, Type, and Status. A 3D model of the grain bin is visible on the left. Below the properties, the 'Product Structure' section is expanded, showing a table of related parts. A red circle highlights the 'Copy' icon in the table header.

Name	Actions	Number	Version	Context	State	Quantity	Line	Organization ID

Figure 1 – Product structure home page with copy icon.

Often times a user is trying to gather multiple related types of data to copy. The product structure page can be useful here as well. See Figure 2 below, and note that WTParts, CAD Files, and Documents can be gathered here.

Figure 2 – Multiple related object selection for copy and paste from the product structure page.

If a user desires to collect related CAD files and copy them to the Windchill PDMLink clipboard, a good place to gather them from is the Updates page on the PDMLink home page. Assuming that the models have been recently touched in a workspace, they are available here with the needed dependants collected, making it easy to gather them for copy to the clipboard. See Figure 3 below.

The screenshot shows the Windchill PDMLink interface. The top navigation bar includes links like Home, Product, Project, Change, Library, Organization, and Suppliers. The 'Updates' tab is selected. Below the navigation bar, there's a welcome message for 'Peter Project Manager' and a 'Recently Accessed' dropdown. The main content area is titled 'Updates' and shows a list of CAD documents. A red circle highlights the 'Copy' button in the top left of the updates list. The table below shows the details of the updates.

Figure 3 – CAD document collection from the recent updates page.

If a user desires WTParts, CAD files or other, then either using search or the folders page can be efficient. The search page location technique provides flexibility and allows you to combine needed parameters to find the needed objects. The folder page provides a browsing approach to gather data for copy to the Windchill PDMLink clipboard. See Figure 4 and Figure 5 for examples of these.

The screenshot shows the Windchill search interface. At the top, there's a navigation bar with links like Home, Product, Project, Change, Library, Organization, and Suppliers. Below this is a search bar with a 'Go' button. The main search area includes a 'Keyword' field, 'Show Results' options (With All of These Criteria or With Any of These Criteria), and a 'Results Per Page' dropdown set to 25. There's a 'Define Scope of Search' section with a 'Search In' dropdown set to 'All Contexts' and a checkbox for 'Apply selection only to contexts I'm a member of'. Below this is a 'Select Search Criteria' section with fields for 'Name' (GRAIN BIN EXT), 'Organization', 'Last Updated', and 'Created', each with a 'Find...' button. There are also date range selectors for 'Last Updated' and 'Created'. A red arrow points to the 'Copy to Clipboard' button in the search results table. The table lists four items, all named 'GRAIN BIN EXT', with details like 'Number', 'Thumbnail', 'Actions', 'Context', 'Version', 'State', 'Organization', 'Last Updated', and 'Created'.

Name	Number	Thumbnail	Actions	Context	Version	State	Organization	Last Updated	Created

Figure 5 – Multiple related or unrelated object types can be collected from the folders page and copied to the Windchill PDMLink clipboard.

Using the location techniques described above a user can collect various types of Windchill data, in a more efficient manner, and copy it to the Windchill PDMLink clipboard for use in the change objects and elsewhere.

E-PROFILES IS HERE!!

We have been eagerly anticipating the debut of the new electronic version of Profiles Magazine and now it is here! This new web site will supplement the print edition of the magazine and will

provide new useful features not feasible with paper media. e-Profiles will provide you with 24x7, worldwide access to key information previously available exclusively in the print version. "Tips & Tricks," a popular feature pioneered by Pro/USER, has also moved to the web and will be expanded as the site matures.

Please take a few minutes to check out this new web site. We don't think you will be disappointed.

Upcoming Events & Training Class Schedules

Upcoming, 2007 Your local Pro/Engineer User Groups
<http://www.ptcuser.org/rugs/>

June 3 - 6, 2007 Tampa, Florida
PTC/USER World Event
<http://www.ptcuser.org/>

Events

Our seminars and conferences seek to provide you with relevant information regarding product development trends in your industry as well as innovative software learning experiences. Think of them as a constructive day off where you can share experiences and swap ideas with your peers.

If you can't manage to get away, we'll bring it to you. Check back often for regularly scheduled live webcast events.

[You're Invited to Attend...](#)

Please visit the [PTC Education Services](#) website for the latest training information including course descriptions, schedules, locations, and pricing.

- Attend a course at any PTC Center and receive a **free** copy of Pro/ENGINEER Wildfire Student Edition!

Live Instructor-Lead Virtual PTC Training Courses

Virtual Classrooms provide interactive learning with a trained PTC instructor in convenient and manageable sessions that last approximately 4 hours over a series of days. It's easy to join a class right from your desk using a phone or voice-over IP technology.

Sessions are performed just like a traditional ILT (including interactive exercises where you and the instructor can work on lab exercises together) and feature some of our most popular ILT courses. These sessions cover the exact same material as the traditional ILT in-center courses. Also look for some of our most frequently requested mini-topics delivered in the same format that are only an hour - two hours in duration.

If you have any questions about these sessions or would like to see getting other courses, not on this list, on the schedule please feel free to contact me for more details. They are a great way to bring training to you without you having to worry about location or being out from work for long stretches.

You can register for these sessions just as you would for any normal ILT class either by:

1. calling order admin at <http://www.ptc.com/services/edserv/training/registra.htm> or
2. you can go to PTC University directly at <http://www.ptc.com/learning> and submit a registration request directly. All you have to do is search the catalog by typing in “virtual” in the search field and you will see a listing.

PTC

Note: This PTC E-Newsletter will continue to be used for the following:

- 1) Inform you on events related to PTC products (user groups, conferences, training schedules, etc.)
- 2) Educate you on solutions that are available at PTC
- 3) Tips & Techniques using PTC Products

Note: These messages are compiled in the local PTC office and will be distributed via e-mail.
