Creo Elements/Direct Modeling COM/.NET API Readme

The Creo Elements/Direct Modeling COM/.NET API is an integration framework with language independent object interface. For more information please refer to the COM/.NET API help file CoCreate.OsdmObjects.chm in the folder common\COM_.NET_API_SDK in the Creo Elements/Direct Modeling installation directory.

The development kit distributed in this folder provides comprehensive resources for using the Creo Elements/Direct Modeling COM/.NET API including valuable information and API documentation for developers. PTC does not provide any other material or training. Please note that integrations with the COM/.NET API require professional software development skills and tools.

Customers and partners with valid Creo Elements/Direct Modeling licenses may use the COM/.NET API as well as the corresponding information and documentation provided in the COM_.NET_API_SDK folder **as is** for their own purposes.

Please note that technical support (phone support, patches, updates, etc.) for the Creo Elements/Direct Modeling COM/.NET API is not available and in particular neither included in your Creo Elements/Direct Modeling support contract nor covered by your PTC Partner Advantage Software Partner membership.

While we will accept specific API defect reports we are not actively enhancing the Creo Elements/Direct Modeling COM/.NET API.
