In this course, you will learn how to configure components of Windchill Service Information Manager. You will understand the defaults enabled with roles, context teams, object initialization, and preferences. You will also learn how to configure Windchill Service Information Manager for use with Windchill Visualization Services.

You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

### Course Objectives

- Define Windchill Service Information Manager product implementation changes
- Define roles, actions, and preferences for Service Information
- Configure Windchill Service Information Manager publishing
Prerequisites

- Introduction to Windchill Service Information Manager 10.1

Audience

- This course is intended for business administrators, system administrators, and project team leaders who need to configure Windchill Service Information Manager. Implementation team members, including user adoption team members and those with general Windchill Service Information Manager administration responsibilities, will also benefit from taking this course.
