In this course, you will learn how to manage product sample requests and samples. You will also learn how to find product samples in the FlexPLM Library and create sample requests for various sample types. You will gain a high level understanding of sample associations to sources, specifications, and measurement sets. You will also learn how to update samples and work with fit sample information. After completing this course, you will be able to manage samples in FlexPLM. You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

Course Objectives

- Understand product sample associations in FlexPLM
- Create product sample requests
- Find and manage product sample information

Prerequisites

- Basic browser and Web navigation skills
- Basic understanding of Product Lifecycle Management processes and deliverables as they relate to seasonal product development

Audience

- This course is intended for production staff and system support staff. People in related roles will also benefit from taking this course.
