In this course, you will learn about Windchill life cycle and workflow templates. Life cycles are composed of states that correspond to the business stages an object reaches as it matures. Life cycle states are used to help regulate user interaction with an object. Workflow templates are used to deliver the activities and manage the events required to promote the object from one stage of maturity to the next.

You will complete Pro/FICINYC skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

Course Objectives

- Create and define life cycle and workflow templates
- Associate life cycle and workflow templates
Prerequisites

- Business Administration Overview of Windchill ProjectLink 10.1

Audience

- This course is intended for business administrators, system administrators, and project team leaders. Implementation team members, including user adoption team members and those with general Windchill ProjectLink administration responsibilities, will also benefit from taking this course.
