Installing ThingWorx 6.5 (Part 1 of Introduction to ThingWorx 6.5)

Overview

Course Code  WBT-4491-A
Course Length  3 Hours

This course is applicable to ThingWorx 6.0 and higher. All features taught in this course apply to ThingWorx 6.0 except for the PostgreSQL database option, which was introduced in ThingWorx 6.5.

This course is the first in a series of eight courses that will teach you how to use ThingWorx 6.5 to build and run the applications of a connected world. In this course, you will be shown how to install a development instance of the ThingWorx Composer and all of its prerequisites on a Windows system.

Course Objectives

• Understand the ThingWorx Composer prerequisites
• Install Oracle Java Development Kit
• Install Apache Tomcat
• Configure Java and Apache Tomcat
• Install ThingWorx Composer

Prerequisites

• Knowledge of scripting technologies (preferably JavaScript) is essential
• Basic knowledge of object-oriented programming concepts such as inheritance, services, properties, and events is essential
• Basic knowledge of installing and configuring Apache Tomcat Web server is recommended
• Basic understanding of model-based development is recommended

Audience

• This course is intended for business development professionals, subject matter experts, and model/content and UI/UX developers. People in related roles will also benefit from taking this course.
