In this course, you gain proficiency and learn advanced skills and techniques for the creation of ThingWorx based user interfaces. Upon completion of this course, you will be able to create a user interface using advanced styling, designed for mobile and desktop use, using multiple mashups. You will also be able to create user-configurable dashboards, enabling the user to configure their own user interface.

Course Objectives

- Use ThingWorx as a user interface development platform
- Use properties, services, and events created by a modeling development team
- Create mashups using widgets, services, and events
- Create a user dashboard
- Use validations and expressions to control user interface visibility
- Gain proficiency in building ThingWorx user interfaces
- Analyze and implement user interface requirements
- Implement best practices in selecting user interface architecture and style
Prerequisites

- Introduction to ThingWorx 6.5 is required.
- ThingWorx 6.5 Modeling and ThingWorx Connectivity are helpful, but not required.

Audience

- This course is for connectivity user interface developers. People in related roles will also benefit from taking this course.
