In this course, you learn about the basic capabilities and functions of the ThingWorx Utilities suite. ThingWorx Utilities are a set of applications and features that run on the ThingWorx platform. They are designed to manage assets and devices in the Internet of Things, extend their capabilities, and enable integration with other systems. While the utilities provide a standard implementation, the utilities are easily configured and extended to be included in your own deployable software solutions.

Course Objectives

- Identify the capabilities of the ThingWorx base utilities
- Identify the capabilities of the ThingWorx add-on utilities
Prerequisites

- Awareness of the IoT architecture and concepts
- Making the Transition to IoT

Audience

- This course is intended for owners, operators, and asset managers who seek to identify standard utilities for managing IoT assets. People in related roles will also benefit from taking this course.
