

# Fixes and Enhancements

## Creo Elements/Direct® Modeling 20.8.1.0

---

Please find below the list of fixes and enhancements - as of November 4<sup>th</sup>, 2025 - that have been implemented for Creo Elements/Direct Modeling and Creo Elements/Direct 3D Access 20.8.1.0.

### **What's New:**

Click the [link](#) to check what is new in the release!

### **NOTE:**

The relations solver has been enhanced in Creo Elements/Direct Modeling 20.3 to provide improved solutions for assembly and parametric relations especially for cases involving tangential transitions within fully constraint model geometry. At the same time this might lead to differently calculated solutions for under-constrained relation sets.

This change might therefore affect existing animations created with previous versions of Creo Elements/Direct Modeling containing relations or involving positional movement of parts. Existing animations capturing positions of models moved by dragging using 3D Copilot could yield in slightly different final positions of the models.
